

Bulgarian Business Forums

Creation and development of sustainable technological innovations.

The goals and activities of Deep Technology Innovation Port Varna are in line with the new innovation strategy of the European Union (New Innovation Agenda), presented for the first time by the European Commission in July 2022. The strategy aims to increase entrepreneurial capacity and competitiveness through the construction of a network of centers in different regions of Europe, specializing in the creation and development of deep technological innovations in various fields.

- Identification of development priorities with the potential for significant growth from the implementation of technological innovations based on the unique characteristics of the region
- Development of a strategy for attracting participants in new startup and scale-up projects and for attracting financing and an environment for implementing technological innovations in business
- Positioning of Varna as a kind of laboratory for experimentation, testing and validation of high-tech innovations and creation of startups and scaleups
