

Asociación Castellano y Leonesa del Hidrógeno (H2CYL)

H2CYL is the Castilla y León Hydrogen Association. Castilla y León is the largest green energy producer in the Southern Europe. H2CYL supports the development of Hydrogen Technologies and the increase of renewable hydrogen production capacities and promotes the use of hydrogen in industrial, domestic and mobility sectors. H2CYL also supports education and technical training of personnel through universities, technology and innovation centres.

Description

Deliverables and milestones

- Help to accelerate the development of the hydrogen equipment, technology and services sector to drive market activation.
- Attract innovative programmes, start-ups and pilot projects to Castilla y León.
- Be the link between industrial, research and academic institutions, generating a growth of qualified employment in the sector. As valley, provide the facilities for the establishment of new companies, and innovation centers, and for the growth of existing companies.
- Organise, with local universities, training programmes focused on the specialization of the employment.
