

Mediterranean Island Cleantech Innovation Ecosystem (MICIE)

The aim of the Mediterranean Island Cleantech Innovation Ecosystem (MICIE) project is to strengthen the contribution of research and innovation (R&I) in achieving the climate and energy targets of Cyprus and Malta, as defined in their National Energy and Climate Plans.

MICIE will achieve this by forging links across and within the two R&I ecosystems, leveraging each country's strengths, and developing synergies to address challenges – ultimately catalysing the development of innovative climate technologies and business models.

- A detailed report on best practices and key learning from other regions and countries that Cyprus and Malta can benefit from when designing their own action plans.
- Workshops with all interested stakeholders in both countries will be held, so that the research and innovation actions to be undertaken will be co-designed in a bottom-up approach.
- Specific, Measurable, Achievable, Relevant, and Time-Bound (SMART) Action Plans will be drafted to be included in the National Energy and Climate Plans (NECPs) of Cyprus and Malta.
