

## CzechInvest - Investment and Business Development Agency

Technology Incubation Program is a unique program combining entrepreneurship education, tailoredmade incubation program for startups and spin-off companies and connecting corporates, venture capital, SME, universities in so-called hubs.

The core idea of the Technology Incubation project is to create a space where the state, academic and private sector can come together. Focus is primarily on AI, mobility, the creative industries, space technology, ecology and the circular economy, smart solutions in the area of healthcare, pharmaceuticals, cybersecurity and nuclear physics. While the project mainly aims at supporting technological startups, it will also offer a broad range of activities and opportunities for other key players on the Czech business scene.

- Support the development of more than 250 companies, startups and, most importantly, innovative ideas
- Establish 7 HUBs in specific sectors
- The cross-sector character of the Technology Incubation project also promises to strengthen the cooperation between the private and research sectors and also with the public administration
- Intensify collaboration with regional innovation and technology centers in order to foster synergies of the various support services
